GENERAL INFORMATION

The model 1500 uto radio is designed for universal under-dash or indash installation and can be used on any 12 volt dc negative to earth electrical system.

OPERATING INSTRUCTIONS

TO TURN THE RADIO "ON."

The on-off switch is combined with the volume control, both of which are operated with the front left-hand knob. Turn this knob clockwise until a "click" indicates that the radio is "ON."

MANUAL TUNING

Turn the volume up until stations can be heard. Then turn the front right-hand knob until the desired station is received. The numbers on the dial scale indicate the frequency of the radio station to which the radio is tuned. Tune carefully until you are exactly on the station; tuning to either side of station will result in poor tonal quality and noisy reception. After station is tuned in properly, adjust the volume control to the desired level.

TO TURN RADIO "OFF."

Turn the front left-hand knob counterclockwise until a "click" indicates that the radio is "OFF."

INSTALLATION INSTRUCTIONS

TO INSTALL RADIO

1) Line up radio to bottom lip of dash.
   a) Attach mounting bracket to the receiver and tighten the screw securely.
   b) Drill two ¼" holes on the underside of the instrument panel to locate the receiver. Insert bolts and nuts.
   c) Tighten all bolts securely.

2) Indash radio installation.
   a) Remove knobs and ring type nuts.
   b) Lift radio into mounting position making sure it clears all obstructions.
   c) Tighten ring type nuts securely and replace knobs.

3) Installation for custom Volkswagen
   To install radio
   a) Install two brackets.
   b) Remove knobs, nuts and dummy knobs.
   c) Insert radio and tighten nuts and install dummy knobs with nuts.
   d) Replace knobs.
