

PHILIPS RADIOPLAYER

MODELS 104 and 104A

SPECIFICATIONS

Subject to alteration without notice.

Power Supply	220-260v., 40-60 c/s.
Tuning Ranges	B/C Band, 530-1620 Kc/s. S/W Band, 5.9-18.4 Mc/s.
Intermediate Frequency	455 Kc/s.
Cabinet	De Luxe Wooden Console.

VALVE EQUIPMENT AND VOLTAGE ANALYSIS

Dial Lamps	6.3v.	0.32a	Tubular Screw					

NOTE: These voltages are measured, with "1,000 ohms per volt" meter, across the resistors indicated, or from the socket points quoted to chassis. They may vary $\pm 10\%$ from the above figures. The receiver should be in a "no signal" condition.

REMOVAL OF CHASSIS FROM CABINET.

Remove the power plug from socket. Remove the four control knobs, speaker and dial lamp plugs from their respective sockets and release the dial cursor assembly from the dial cord. Lay the cabinet flat and remove the four chassis mounting bolts. In withdrawing the chassis make sure that the dial drum does not foul the cabinet, otherwise damage may ensue.

The chassis may be replaced by a reversal of the above procedure.

DIAL GLASS REMOVAL.

Raise the dial glass into its maximum forward position. This allows access to the dial glass clamping screws in the dial assembly end housing. Loosen the clamping screws (it is not necessary that they be completely removed) and withdraw the dial glass from the assembly. When the dial glass is replaced make sure that it is securely clamped.

MAINS VOLTAGE ADJUSTMENT.

The power transformer is provided with two mains voltage tapplings, 220/240 volts and 250/260 volts. This Radioplayer is adjusted at the Factory to the 220/240 volts tapping.

ALIGNMENT.

The calibrated scale on the top edge of the chassis, in connection with an auxiliary pointer, which can be made up from workshop materials, facilitates alignment. With the gang fully closed, set the auxiliary pointer to the letter "S" mark.

On the short wave band the receiver oscillator operates at a frequency above that of the incoming signal.

DIAL LAMP REPLACEMENT.

This operation is carried out from outside the cabinet. The lamps are located one at each end of the dial glass, in the end housing. The covers are a clip fit and are easily removed.

REMOVAL OF INCLINATOR DIAL ASSEMBLY.

After the chassis is removed from the cabinet—see "Removal of Chassis from Cabinet"—the inclinor dial assembly mounting brackets (one at each end of the assembly) are easily accessible. Removal of the mounting brackets permits the dial assembly to be lifted clear of the cabinet.

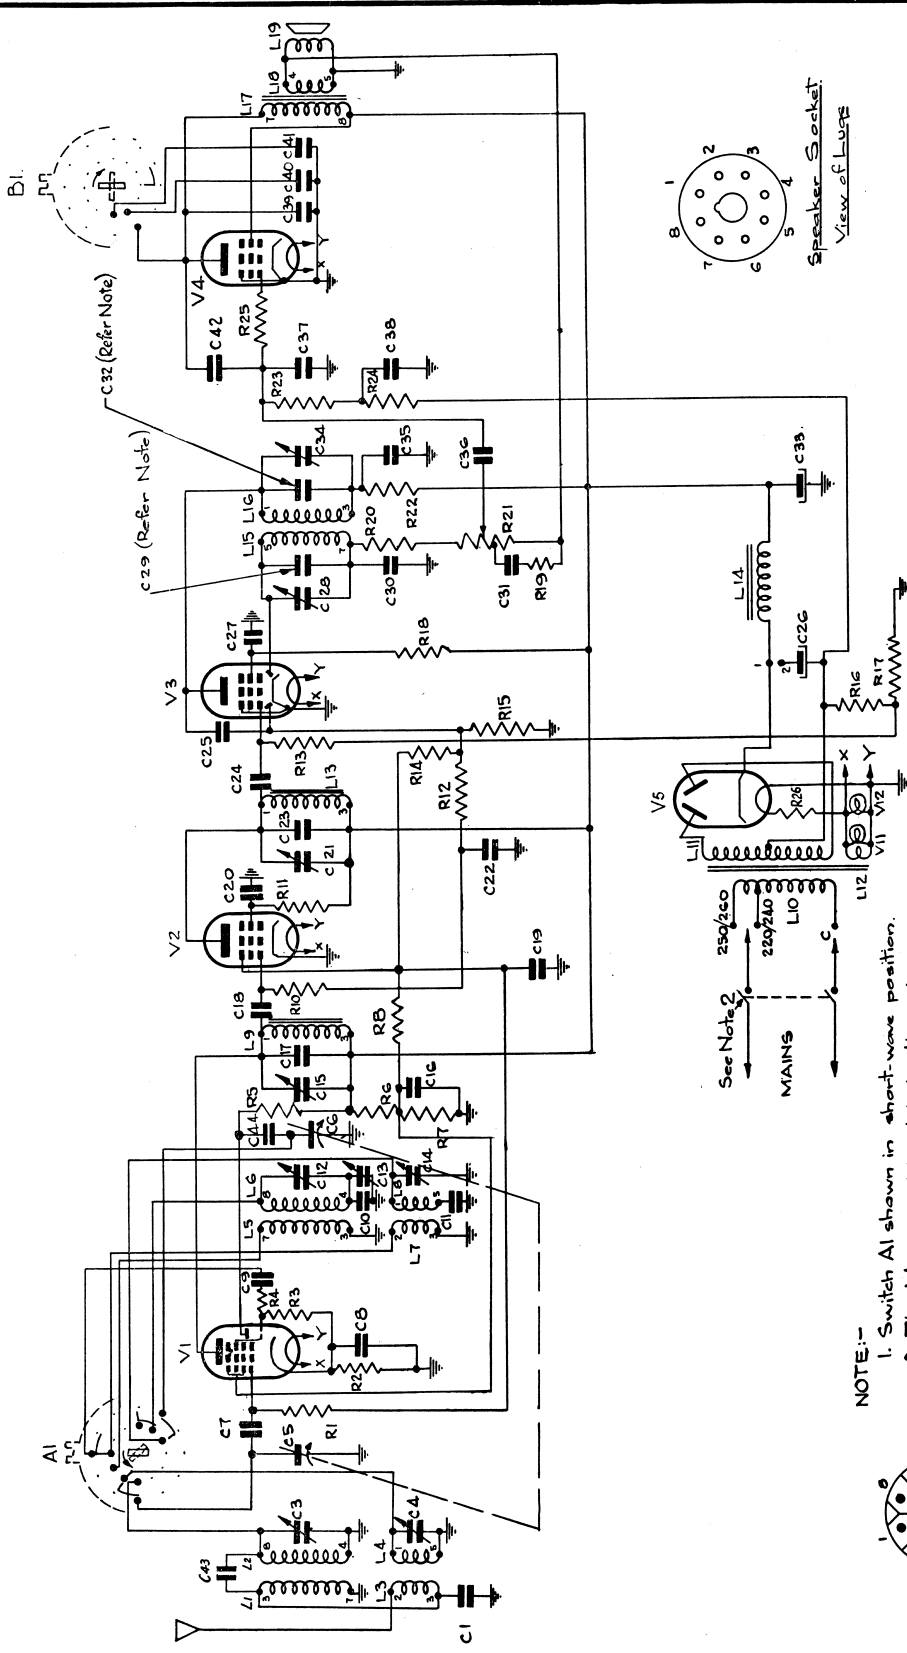

In order to prevent possible damage to the dial glass, it is well to remove it before commencing the removal of the dial assembly—see "Dial Glass Removal."
