

Radiola Model 262

ELECTRICAL SPECIFICATIONS.

Voltage Rating	200-260 volts
Frequency Rating	40-60 cycles
(Special instruments made for other voltage and frequency ratings)	
Power Consumption	140 watts
Tuning Ranges	(A) 1500-550 kilocycles (B) 35-105 metres (C) 13-39 metres
Intermediate Frequency	460 kilocycles

VALVES AND CIRCUITS.

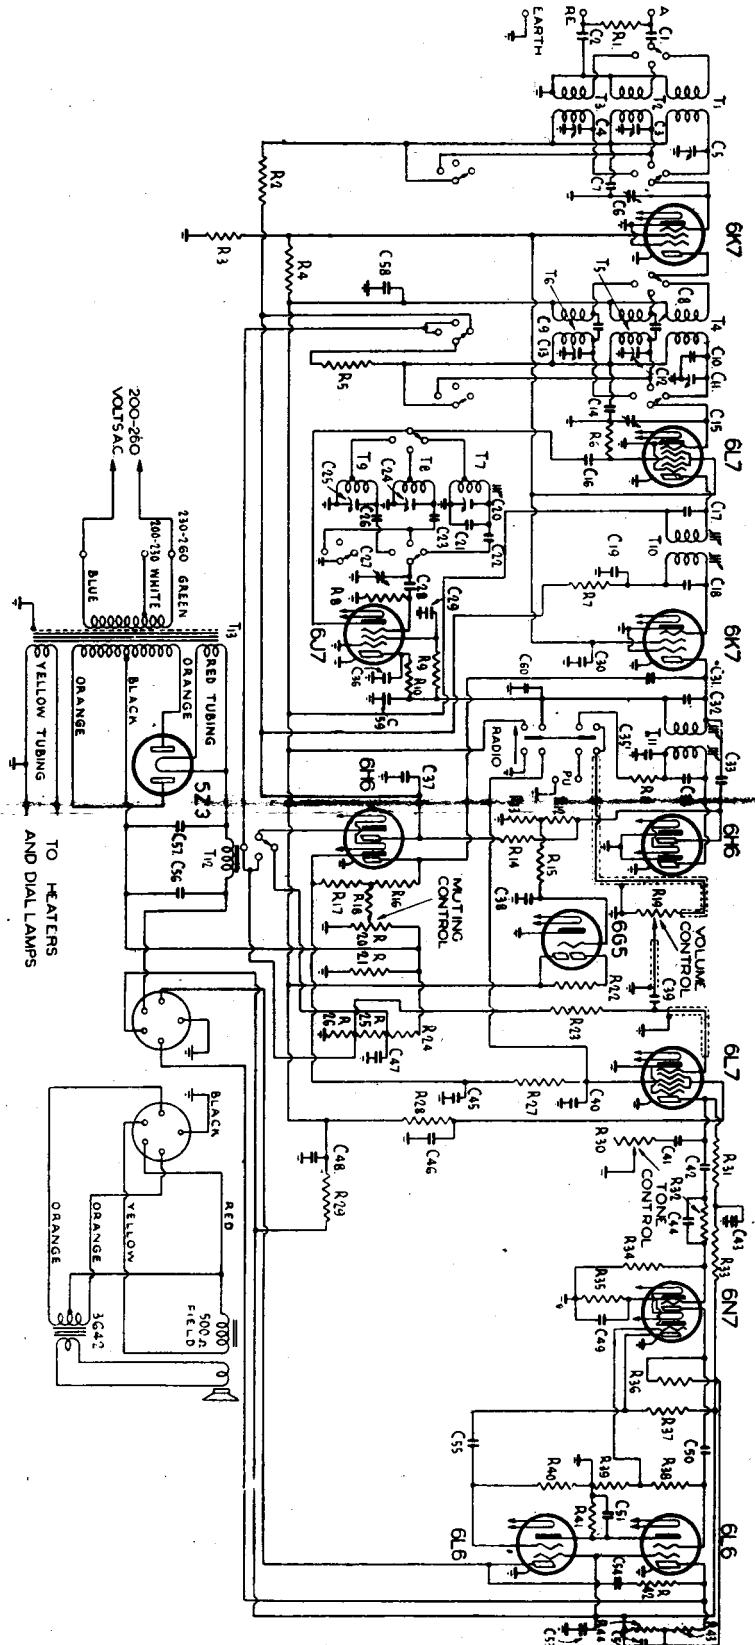

6K7	R.F. Amplifier	6H6	Detector and A.V.C.
6L7	Converter	6H6	Muting Diode
6J7	Oscillator	6L7	Audio Amplifier
6K7	I.F. Amplifier	6N7	Audio Amplifier
Two 6L6's in Class A B Push-pull		5Z3	Rectifier

SOCKET VOLTAGES.

VALVE	Chassis to Cathode Volts	Chassis to Screen Grid Volts	Chassis to Plate Volts	Plate Current M.A.	Heater Volts

R24		25,000 ohms, $\frac{1}{2}$ watt						

RADIOLA 262 CIRCUIT DATA

OPERATING VOLTAGES.

The operating voltages for most of the corresponding valves in models 257 and 262 are identical, and so only those valves whose operating voltages differ will be mentioned here, along with the operating voltages of the additional valves. Operating voltages for any of the valves in model 262 not mentioned hereunder will be found on reference to model 257. The following measurements were made under similar conditions to those given for model 257.

6J7, Oscillator: Plate, 220 v. (240 v.); screen, 205 v. (200 v.); cathode, zero. Plate current, 3 mA.

6L7, A.F. Voltage Amplifier: Plate, 135 v.; screen, 40 v., cathode, zero. Plate current, 0.8 mA.

6N7, Phase Inverter: Each plate, 175 v.; cathode, 4.5 v. Each plate current, 2 mA.

6L6, "Beam" Output Tetrodes: Each plate, 300 v.; each screen, 315 v.; each cathode, 20 v. Each plate current, 55 mA.

5Z3, Rectifier: A.C. volts each plate (measured from C.T. of high-voltage secondary of power transformer), 410 v.; total current, 150 mA.; voltage drop across loudspeaker field, 75 v.

Radiola Model 262

Radiola model 262 is an 11-valve three-band receiver whose basic circuit design is identical to that of model 257. The main point of difference is that a 6N7 double-triode, acting as phase inverter and "driven" by the 6L7 A.F. voltage amplifier has been added to model 262; the 6N7, phase inverter, is followed by two 6L6's in push-pull, this latter being the output stage of the receiver.

The type 80 rectifier valve used in model 257 has been replaced by a 5Z3 in model 262, and the tone control unit will be found connected from the plate of the 6L7 "driver" to chassis in this latter model; a 0.01 mfd. condenser in series with a 300,000 ohms potentiometer comprises this unit. Another minor point of difference will be found in the field coil resistance, which is 500 ohms in model 262.
