PULLEY AND DIAL DRUM LAYOUT

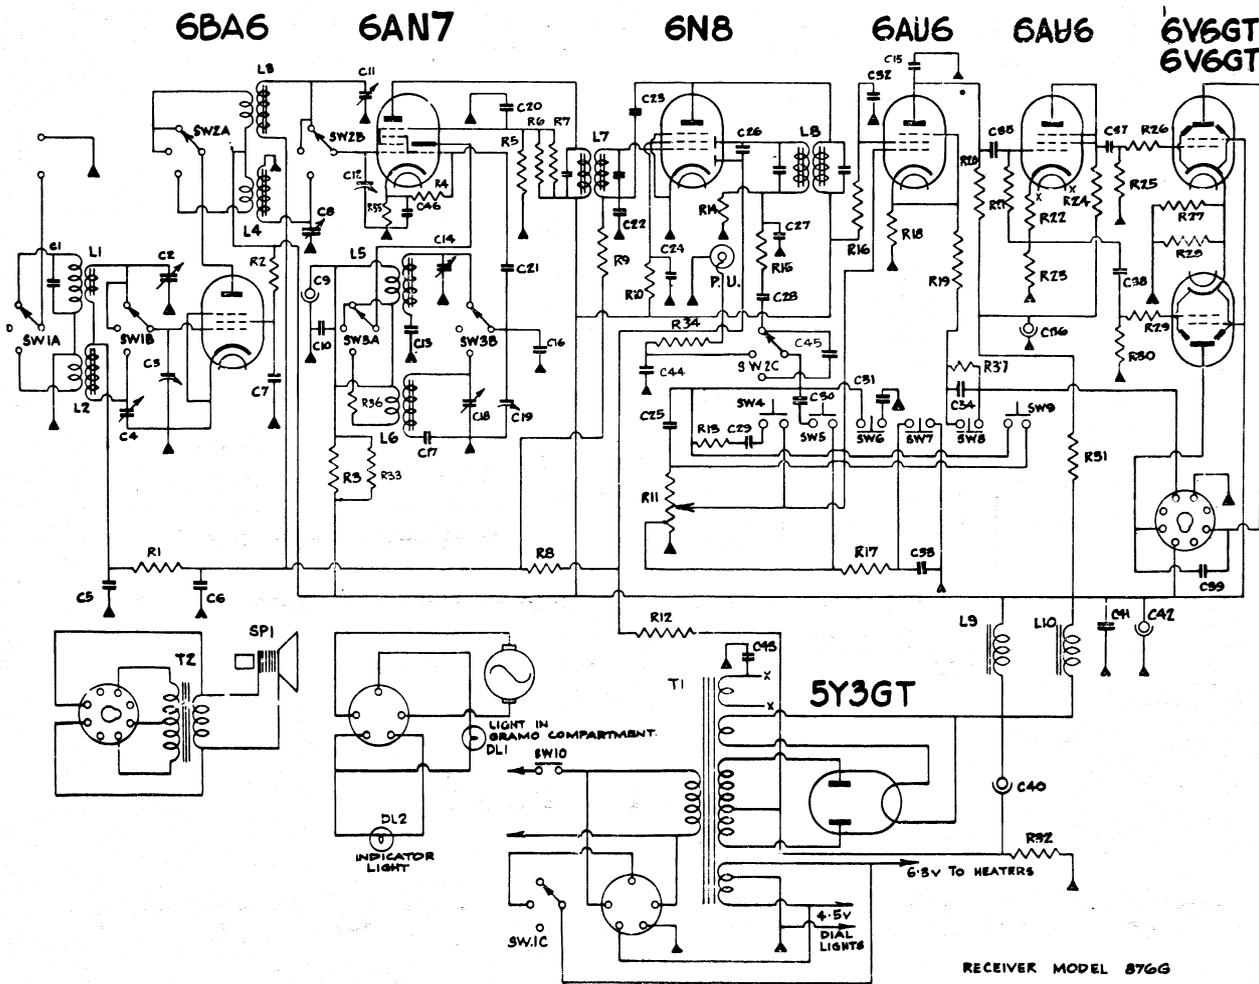

(a) **5 Pulley Type:** Gang full in. Anchor cord at point A, around drum one turn clockwise, round back of pulley B, front of pulley C, round pulley D, $1\frac{1}{2}$ turns anti-clockwise around front drive pulley with first turn at front, around drum $\frac{1}{2}$ turn clockwise nearest front edge of drum, round pulley E clockwise, across to pulley F, round pulley F, to drum $\frac{1}{2}$ turn clockwise (3rd cord from front), round rear drive pulley 2 turns anti-clockwise with first turn in front, round drum $1\frac{1}{2}$ turns clockwise, through hole G to spring. Anchor spring at A.

(b) **2 PULLEY TYPE:** Gang full in. Anchor cord at point A. Round drum one turn clockwise, round front drive pulley 3 times anti-clockwise with second turn behind first, round drum $\frac{1}{2}$ turn anti-clockwise, round pulley E, round pulley F, round drum one turn clockwise, through hole G to spring. Attach spring at A.

Dial Adjustment: To correctly position pointer, turn gang full in, loosen drum grub screws. Rotate drum until pointer is directly behind a dot near station 2CR. Tighten grub screws.

Alignment: Use standard procedure. Aerial and R.F. trimmers and slugs to be adjusted at 600KC, 1400KC, 7 Megs, and 17 Megs.

Position of trimmers: Aerial trimmers are in the rear compartment. R.F. trimmers are in the front compartment. Osc. trimmers, tubular types, in the front compartment.
