

ALIGNMENT PROCEDURE

The following equipment is required for alignment :

1. Signal generator with a frequency range of at least from 455 KC to 1670 KC, AM.
2. Vacuum tube volt meter.
3. Oscilloscope with a wide range amplifier of approximately 100 KC.
4. Test loop, a coil of any size wire, one turn or more.
5. For alignment points, see schematic.

NOTES :

During alignment keep the signal generator outputs at the lowest level that will maintain a useable output from the set.
