

A.W.A. Duoforte Forty-five

The A.W.A. Duoforte Forty-Five

The Duoforte Forty-Five is an alternative to the Duoforte Ninety, uses a four-valve all-electric screen grid chassis and is housed in an artistically designed, veneered cabinet of Queensland Maple. Designed to give inter-State reception, it is operated by a single control. The moving coil loud speaker is built into the console cabinet, which incorporates the latest developments in scientific acoustics and is extremely pleasing in regard to both finish and proportion. In addition to the radio receiver, the Duoforte Forty-Five is equipped with a phonograph electric unit, consisting of a disc type turntable motor, with automatic stop, high grade pick-up, latest model tone arm and a volume control device. A special feature is its faithfulness of reproduction.
