A•C OPERATION

The Radiola 75 is a broadcast receiver of the latest design which combines highly efficient performance, new ease in operation and a cabinet of beauty and distinction. Utilising recently developed circuits, and a high fidelity loud speaker, the Radiola 75 reproduces Australian broadcast programmes with gloriously natural tone.

The fully inclined instrument panel is an outstanding development for convenience in operation and the new open-faced Rotovisor dial, calibrated in metres, kilocycles and marked with "A" and "B" class station call signs, constitutes the most simple method of tuning yet devised.

The modern and beautiful cabinet of Queensland walnut veneers, with graceful lines and curves, is finished in a high gloss lustre.
