(A DIVISION OF ELECTRONIC INDUSTRIES LTD.)

11-21 STURT STREET, SOUTH MELBOURNE
TECHNICAL BULLETIN

BULLETIN: CQN-1

File: RECEIVERS AC.

Date: 20-6-53.

Page 1.

MODEL CQN

8 Valve Superheterodyne Four Band Mantel Model Receiver
Incorporating Bandspread of the 19,
25 and 31 Metre Shortwave Bands.

FOR OPERATION FROM:—

32 volt D.C. Supply.

CURRENT CONSUMPTION:—

.85 Amps. (Does not include dial lamps or band indicator lamp).

1.1 Amps. (Includes three dial lamps and one band indicator lamp all wired in series. Each lamp 6-8 volt 0.25 amp.).

TUNING RANGE:—

Broadcast Band, 535-1610 Kc/s.

560.7-186.3 Metres

19 Metre band, 14.9-15.5 Mc/s (Bandspread)

20.13-19.29 Metres (approx.)

25 Metre band, 11.6-12.1 Mc/s (Bandspread)

25.86-24.79 Metres (approx.)

31 Metre band, 9.4-9.8 Mc/s (Bandspread)

31.91-30.61 Metres (approx.)

THIS BULLETIN CONTAINS:—

1. Alignment Instructions.
2. Circuit Diagram.
3. Component Parts List.
4. Connections for IF and RF Trans.

ALIGNMENT INSTRUCTIONS:—**ALIGNMENT CONDITIONS:—**

		EQUIPMENT:—
Load impedance	-5,000 ohms	Signal generator
Output level	-50 milliwatts	Output meter
Volume control	-Max. Vol. (fully clockwise)	Mica capacitor -0.01 MFD Dummy Antenna -200 MMFD Mica capacitor
Tone control	-Treble position	
Intermediate freq.	-455 Kc/s	Dummy Antenna -400 Ohm non-inductive resistor
DC Supply	32 volt DC mains	Alignment tools-Part No. M195 & PM581 IF. Attenuator -Part No. M174

Operation No.	Generator Connection	Generator Frequency	Dummy Antenna	Instructions
1.	To control grid of 6U7G 2nd IF. valve.	455 Kc/s.	0.01 MFD Mica capacitor in series with generator.	Turn wave change switch to B/cast band. Leave grid clip on valve. Peak 3rd IF trans. pri. and sec. for max. output.
2.	To control grid of 6U7G 1st IF. valve.	455 Kc/s.	0.01 MFD Mica capacitor in series with generator.	Leave grid clip on valve. Peak 2nd IF. trans. pri. and sec. for max. output.
3.	To control grid of 6AN7 valve pin No. 2.	455 Kc/s.	0.01 MFD Mica capacitor in series with generator.	Cond. gang plates fully out of mesh. Leave grid wire connected to valve socket. Peak 1st IF. trans. pri. and sec. for max. output.
4.	Set centre of dial pointer on centre of end of travel mark on dial reading near 550 Kc/s. Cond. gang plates fully meshed.			
5.	To antenna terminal.	600 Kc/s.	200MMFD. Mica capacitor in series with generator.	Turn gang and dial pointer until dial pointer is on 600 Kc/s. dial mark. Leave the gang and dial pointer set in this position and peak the B/cast oscl. coil. ind. trim (iron core) for max. output.
6.	To antenna terminal.	1400 Kc/s.	200MMFD. Mica capacitor in series with generator.	Turn gang and dial pointer to 1400 Kc/s. dial mark. Adjust B/cast oscl. coil trim. cond. for logging and peak B/cast ant. and RF. trans. trim. condensers for max. output.
7.	To antenna terminal.	600 Kc/s.	200MMFD. Mica capacitor in series with generator.	Turn gang and dial pointer to 600 Kc/s. dial mark. Leave the gang and dial pointer set in this position. Re-peak the B/cast oscl. coil ind. trim. (iron core) then peak the B/cast ant. and RF. trans. ind. trimmers (iron cores) for max. output. Do not rock the gang to and fro through the signal while adjusting or move the dial pointer off 600 Kc/s. dial mark until after the inductance trimmers of these three transformers have been peaked for max. output.

8. To antenna terminal. 1400 Kc/s. 200MMFD. Mica capacitor in series with generator. Turn gang and dial pointer to 1400 Kc/s. dial mark. Adjust B/cast oscl. coil trim. cond. for logging and peak B/cast ant. and RF. trans. trim. condensers for max. output.
9. Turn wave change switch to 31 metre band (this band must be aligned before the 25 and 19 metre bands).
10. To antenna terminal. 9.6 Mc/s. 400 Ohm non-inductive resistor in series with generator. Turn dial pointer and gang to 9.6 Mc/s. Adjust 31 metre band oscl. coil ind. trim. (iron core) for logging and peak 31 metre ant. and RF. trans. ind. trimmers (iron cores) for max. output. Rock gang to and fro through the signal while adjusting.
11. To antenna terminal. 11.8 Mc/s. 400 Ohm non-inductive resistor in series with generator. Turn wave change switch to 25 metre band. Turn dial pointer and gang to 11.8 Mc/s. Adjust 25 metre band oscl. coil ind. trim. (iron core) for logging and peak ant. and RF. trans. ind. trimmers (iron cores) for max. output. Rock gang to and fro through the signal while adjusting.
12. To antenna terminal. 15.2 Mc/s. 400 Ohm non-inductive resistor in series with generator. Turn wave change switch to 19 metre band. Turn dial pointer and gang to 15.2 Mc/s. Adjust 19 metre band oscl. coil ind. trim. (iron core) for logging and peak ant. and RF. trans. ind. trimmers (iron cores) for max. output. Rock gang to and fro through the signal while adjusting.
13. Check the logging of the shortwave bands on some well-known shortwave stations. If a crystal calibrator is available check the logging at each 100 Kc/s. mark on the dial.

BANDSPREAD COILS:-

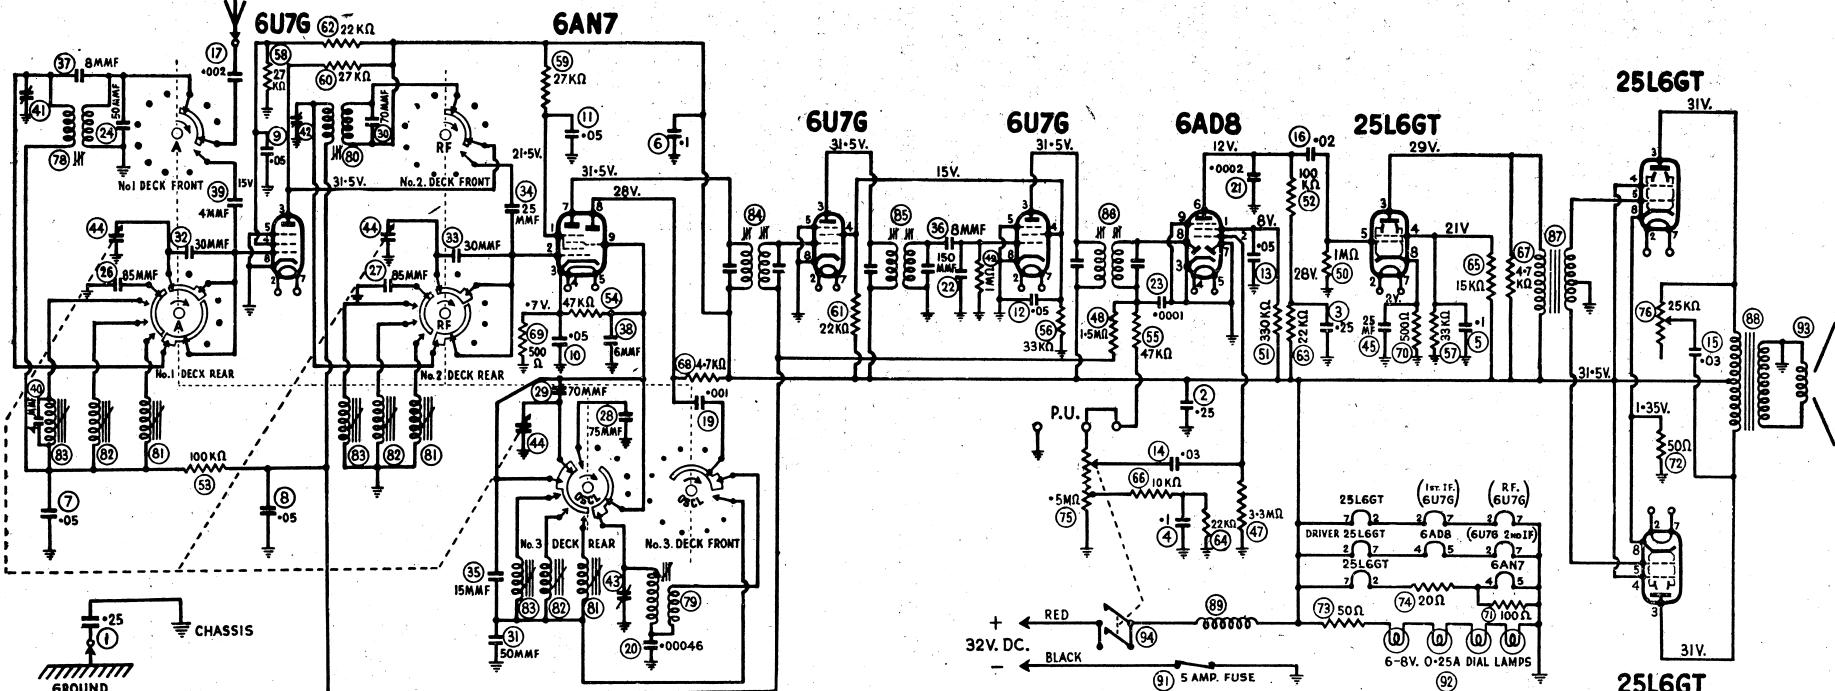

31 metre coil, RED spot on iron core end of former.

25 metre coil, WHITE spot on iron core end of former.

19 metre coil, BLUE spot on iron core end of former.

NOTE:-

The I.F. attenuator part No. M174 (.004 MF cond. and a 20 K. ohm. resistor in series) is connected between the 6U7G 1st. IF. valve control grid and chassis during alignment of the RF. and antenna stages and during the measurement of the overall sensitivity.

VOLTAGES ON CIRCUIT ARE MEASURED BETWEEN POINTS INDICATED AND CHASSIS WITH A DC. VACUUM TUBE VOLTMETER, 32VOLT DC. INPUT
WHEN MEASURING VOLTAGES IN HIGH IMPED. CIRCUITS, - LOWER READINGS THAN THOSE SHOWN WILL BE OBTAINED - IF A V.T.V.M. IS NOT USED -
DEPENDING ON THE RESISTANCE OF THE METER USED. EG: $1000\Omega/VOLT$ OR $20,000\Omega/VOLT$.

PB691

The first production run, chassis serial numbers 2501 to 2600 were incorrectly wired. The shortwave bandspread antenna coils circuit Nos. 81, 82 and 83 are wired to the chassis instead of being wired to the A.V.C. line as shown by the circuit. An improvement in A.V.C. action on shortwaves will be noted if the above correction is made.
