SUBJECT-Wax Sealing of Tuning Adjusting Screws.

Some of the waxes used for sealing of the adjustable tuning screws (IF. transformer screws, etc.) are totally unsuited for the purpose they are used in that they will not adhere to metal surfaces and are often of too hard a material.

Sticks ($7\frac{1}{2}$ " \times $\frac{1}{2}$ " dia.) part No. 368/30C of a suitable wax have been made up to standardize the material and to facilitate service requirement.
