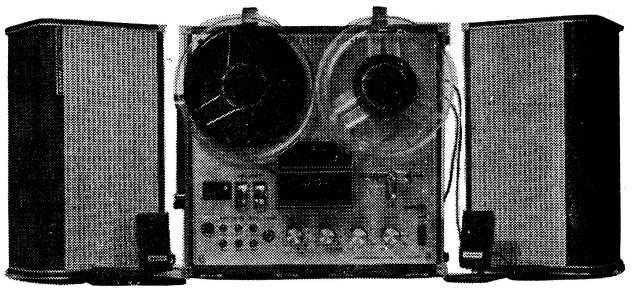
SANYO



Solid State Stereophonic Tape Recorder
4-track, 2-channel System

MODEL MR-909

SERVICE MANUAL

SANYO ELECTRIC CO., LTD.
INTERNATIONAL DIVISION : SANYO ELECTRIC TRADING CO., LTD.
OSAKA, JAPAN

SPECIFICATIONS

Recording system ····· AC magnetic biasing 4-track stereo
Erasing system ····· AC magnetic erasing
Transistors ····· 2SB303×2 1st amplifier
2SB186×2 2nd amplifier
2SB186×2 3rd amplifier
2SB186×2 4th amplifier
2SB373×4 Power amplifier
2SB272×2 AC biasing oscillator
Diodes and other elements ····· 1S188×2 Audio level detector
Selenium rectifier
Tape speed ····· 7-½ ips (19 cm/sec), 3-¾ ips (9.5 cm/sec)
Playing time ····· 7-½ ips 120 minutes (double tracks)
3-¾ ips 240 minutes (double tracks)
Fast forward and rewind time ··· Less than 3 minutes (at 7″ tape)

Frequency response ····· 30 - 13000 cps (at 7-½ ips)
70 - 7000 cps (at 3-¾ ips)
Power output ····· Maximum 3 watts (each channel)
Undistorted 2.5 watts (each channel)
Input and output ····· Microphone jacks 25K ohms
Auxiliary jacks 100K ohms
Head phone jack 10K ohms
Line output jacks 1K ohms
Speaker ····· 4″ free edge permanent dynamic, impedance 8 ohms
Power source ····· 90/100/117/220/240V AC, 50/60 cps.
Dimensions (W×D×H) ··· Main Unit 13″×5½″×12¾″ (33×14×32cm)
Speaker Box 6½″×5¼″×12¾″ (16×13×32cm)
Weight ····· 38 lbs. (17 kg)

REMOVING MECHANISM FROM CABINET

In order to repair the mechanism or amplifier, it is necessary to remove the recorder unit from the cabinet. To remove, observe the following instructions :

1) Place the recorder upside down and remove five philips screws on the bottom of the cabinet.
2) Turn the recorder to normal position and remove four philips screws at the four corners of upper panel and a screw in the head housing.
3) Remove two volume control knobs, two tone control knobs and recording knob by pulling upward. Remove operating lever by turning counter-clockwise.

Above procedures will permit the removal of mechanism and amplifier from the cabinet.

ADJUSTMENT OF MECHANISM

When inadequate operation is noticed in fast forward or rewinding, or when unusual slackening of tape occurs at the time of changing (switching) from stop to play, or when improper tension is noted on the tape in each operation, while the tape recorder is operating properly otherwise, the following adjustments are required.

1) Measuring Equipment.

Although no measuring equipment or tool is required, tension gauge (500g with 20g scale, 2kg with 100g scale) will be useful after adjustment.

2) Brake Mechanism.

For operation at regular speed (record - playback) and for changing from fast forward to stop, the brake should apply strongly to feed reel base and weakly to takeup reel.
Turn the adjusting screw to adjust contact to the reel base. (See Fig. 1).
When the brake doesn't apply, it causes an opening of over 0.5mm between reel base and brake shoe. Therefore, the brake shoe should touch the reel base smoothly.

3) Fast Wind Mechanism.

There must be no aperture between the takeup reel base and the screw for fixing takeup reel base. Should there be an aperture at fast winding, it is necessary to change the nylon washer for a thicker one, or to move the lever upward a little to uphold the fixing metal so that the pressure between reel base and pulley becomes satisfactory (See Fig. 2).
Check the rotation of feed reel base. After completing this adjustment, function 'Rewind' and 'Playback', and check for defective operation and unusual noise.

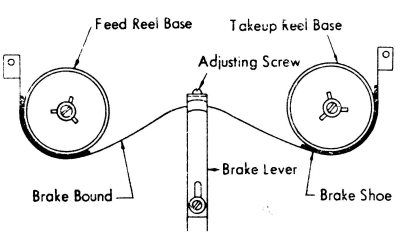


Fig. 1

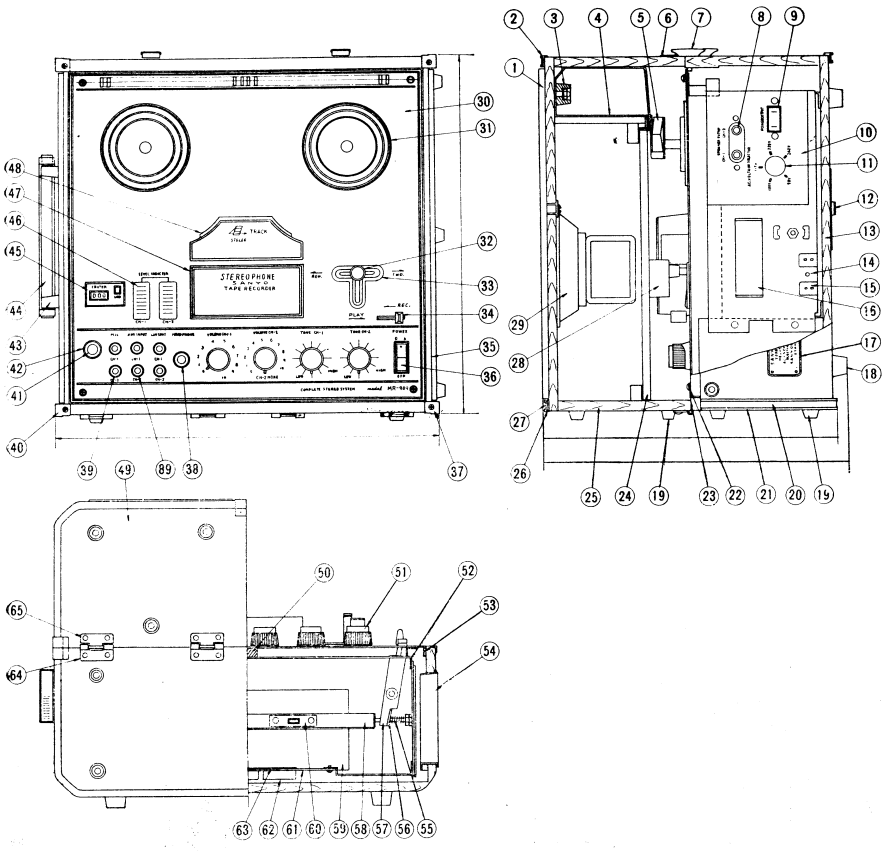
CONSTRUCTION DIAGRAM (CABINET)



DESCRIPTION

ILLUST No.	STOCK No.	PARTS NAME
1	R-31582	Panel
2	R-27036	Corner Proof
3	R-44067	Spacer
4	R-36167	Cover
5	R-44224	Cap
6	R-237460	Fixing metal
7	R-581006	Fixing metal

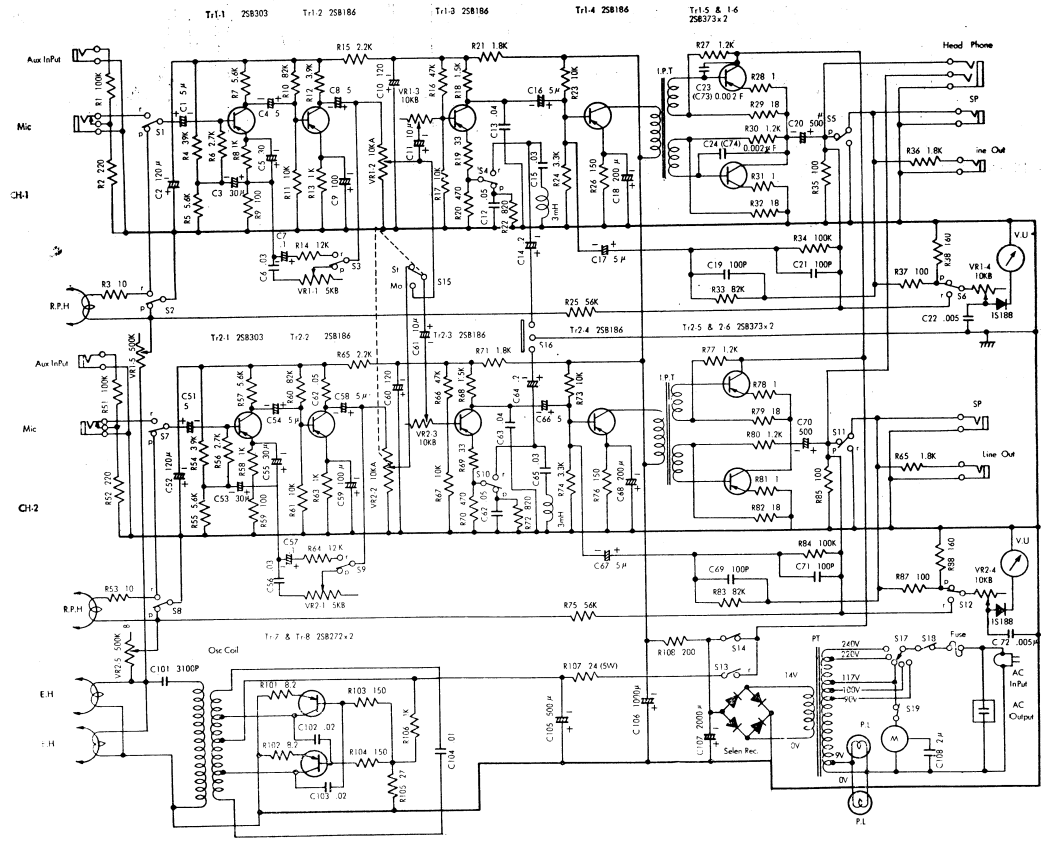
CIRCUIT DIAGRAM



1) S1···S6, S7···S12, S13 (PLAY Position) Recording SW.
2) S14 (PLAY and RECORD Position) Switch ON at Record and Play.
3) S15 (Stereo Position) Stereo, Chan. 1 Monaural Changing SW.
4) S16 (7½ ips Speed Position) Compensative SW.
5) S17 (117V Position) Power Line Changing SW.
6) S18 (ON Position) Power SW.
7) S19 (ON Position) Motor SW, Switch OFF at Stop Position.
8) VR1-1 VR2-1 (5k B type) Tone Control at Play.
9) VR1-2 VR2-2 (10k A type; VR2-2 only Connected with S15)
   Volume Control at Play, Level Control at Record.
10) VR1-3 VR2-3 (10k B type Fixed) Gain Control at Record.
11) VR1-4 VR2-4 (10k B type Fixed) Input Control of Level Indicator.
12) VR1-5 VR2-5 (500k B type Fixed) Bias Current Control.
13) All Resistance Values in Ohms. k=1000 Ohms
14) All Capacitances with Decimal Values are in "μF". μ="μF" p="pF"="μμF"

5-20001 Printed in Japan

4) Rewind Mechanism.

If the nut (1) is worn out, the rewinding roller pressure against feed reel will increase gradually. Tighten nut (2) so that the rewind operation can be completed within 3 minutes for a full 7″ reel tape. After making this adjustment, tighten the nut (2) to clamp the nut (1). This will be followed by lacquer fixing. Check the tension of takeup reel base, contact between brake and reel base, and also for unusual noise.

Note : Pay particular care when shifting the operating lever so that its position will be correct (See Fig. 3).

5) Playback Mechanism

Pressure between the pinch roller and capstan (flywheel shaft) is to be gauged; satisfactory tension is between 650 to 950g. To take the reading, playback the tape at 9.5cm (3-3/4″)/sec. speed, pull the pinch roller toward you until the tape stops, and read the tension gauge. This process should be repeated two or three times, and adjustment is made with coil spring (See Fig. 4).

6) Adjusting Pad

The felt should be placed so that it will come into contact with the head core slit at the right angle and that the center of the felt properly meets the core slit section. The felt should firmly contact the entire width of the tape. The pressure between the pad and head should be measured, satisfactory tension is between 20 to 25g.

MAINTENANCE

1. Oiling (Lubrication)

When excessive oil is applied, it may overflow along the shaft and adhere to the rubber parts of the belt and pinch roller, causing slipping, wow or flutter. Care should be taken to limit the amount of oil applied or on how to oil.

2. Oiling Parts.

Pinch Roller (Fig. 5), Flywheel Shaft (Fig. 6),
Rewind Roller (Fig. 7), Motor,
Reel Base and Reel Base Pulley (Fig. 8), Counter and Pulley,
Idler

3. Oiling of Other Parts.

Oiling of the revolving parts is mentioned above. It is essential to clean and oil metal-to-metal contact surface, shaft and bearing of each lever at least once a year.

4. Cleaning the Tape Transport Sections.

The tape travels from the feed reel to pinch roller through two tape guides, erasing head, recording head, pad, tape guide and capstan. When dust or ferrous powder on the tape adheres to these parts, insufficient erasing, non-recording, poor high tones, less volume and slipping may result. Utmost care should be taken to clean these parts.

Parts such as tape guide, each head, pinch roller and capstan should be throughly cleaned with a soft cloth or gauze soaked in carbon tetrachloride.

5. Oiling Rotating Parts.

All rotating parts of this set are of oil-less metal, except for reel spindle, rewind roller, and fast forward roller. To insure smooth functions, oil-less metal parts are sealed from exposition to air. Accordingly, these parts must be disassembled before applying lubricant.

6. Storing

Before closing the lid of tape recorder ····· after operation or when storing ····· make sure the control is set to "STOP" position.

MECHANICAL TROUBLE CHART

SYMPTOM	CAUSE	REMEDY
Capstan doesn't rotate	Motor trouble.	
	1. Coil failure.	Replace.
	2. Metal bearing burnt.	Lubricate or replace.
	3. Foreign material between rotor and stator.	Remove foreign material or replace.
	4. Oil adheres to motor pulley or rubber belt.	Clean with carbon tetrachloride or alcohol.
	5. Flywheel shaft burnt or oil shortage.	Lubricate or repair.
	6. Rubber belt loosened.	Repair or replace.
	7. Capstan sleeve loosened.	Tighten.
	8. Motor pulley loosened.	Tighten.
Wow & Flutter.	Defective motor.	
	1. Foreign material between rotor and stator.	Remove foreign material or replace.
	Slipping Tranmission Mechanism.	
	1. Foreign material on flyweel.	Clean with carbon tetrachloride or alcohol.
	2. Foreign material on rubber belt.	-ditto-
	3. Flywheel shaft bent or inclined.	Replace.
	Defective Tape Transport.	
	1. Lack of pinch roller pressure.	Adiust pinch roller pressure to 650-950g.
	2. Foreign material on pinch roller or transformation.	Clean wlth carbon tetrachloride or alcohol.
	3. Dust adheres to tape transport slot.	-ditto-
Reel base doesn't when reel is not placed.	Defective Winding.	
	1. Defective rubber belt.	Clean (ditto) or replace.
Reel base doesn't rotate when reel is placed.	Defective Winding.	
	1. Slipping of pulley, flywheel, reel base pulley.	-ditto-
	2. Takeup reel base or pulley lacks oil.	Lubricate.
	3. Feed reel base lacks oil.	Lubricate.
	4. Rewind roller doesn't contact reel base or belt.	Adjust rewind roller pressure to 500-600g
Brake doesn't work.	1. Brake folding under.	Adjust or replace.
	2. Poor brake adjustment.	Adjust brake position or replace.
Unable to record. (RP select switch doesn't work)	1. Select level coil spring broken.	Replace.
	2. Foreign material on RP select switch.	Clean with carbon tetrachloride or alcohol.
Imperfect erasing.	1. Erasing head wrong position.	Adjust height or put forward.
	2. Erasing head slit dirty.	Clean with carbon tetrachloride or alcohol.
	3. Weak pressure of head pad.	Adjust coil spring pressure to 20-25g or replace felt.
	4. Dust adheres to tape guide.	Clean with carbon tetrachloride or alcohol.
Motor noise	1. Rotation noise.	Lubricate or replace.
	2. Loosened screw of motor.	Tighten.
Reel base noise.	1. Brake shoe contacts reel base.	Repair or replace.
Defective tape counter.	1. Wrong counter gear.	Repair or replace.
Defective transmission mechanism.	1. Oil adheres to rubber belt.	Clean with carbon tetrachloride or alcohol.
	2. Loosened rubber belt.	Repair or replace.

ELECTRICAL TROUBLE CHART

SYMPTOM	CAUSE	REMEDY
When switch is turned on, but pilot lamp doesn't light.	1. Defective power cord.	Repair or replace.
	2. Blown or loosened fuse.	Replace.
	3. Defective power switch.	Replace.
	4. Defective power transformer.	Replace.
Pilot lamp lights up but motor doesn't rotate.	1. Defective motor.	Replace.
	2. Defective spring switch.	Replace.
	3. Defective starting capacitor.	Replace.
B-power voltage is not applied.	1. Defective rectifier.	Replace.
	2. Smoothened circuit failure C106 or C107.	Replace.
	3. Short of B power supply load.	Check voltage of each section.
	4. Defective power transformer B winding.	Replace.
	5. Lack of power supply voltage on AC current.	Check and adjust.
Unable to record and reproduce (CH-1, CH-2) .	1. Defective amplifier.	Check voltage and gain. Replace.
	2. Defective RP head.	Replace.
	3. Poor contact between tape and RP heads.	Check tape loading and head contact section. Adjust.
	4. Switch (S14) failure.	Repair or replace.
	5. SP, Headphone, Line out jacks failure.	Repair or replace.
	6. Shortage between head and amplifier leads.	Repair.

SYMPTOM	CAUSE	REMEDY
Unable to record and reproduce (CH-1).	1. Defective amplifier.	Check and replace.
	2. Defective SP head phone jacks.	Repair or replace.
	3. Short or broken leads between head and amplifier.	Repair.
Reproduces but doesn't record (CH-1, CH-2).	1. RP select switch failure or wrong contact.	Repair or replace.
a) Indicator doesn't work.	1. Defective indicator or indicator circuit.	Repair or replace.
	2. Defective microphone.	Replace.
	3. Microphone, Aux. jacks failure.	Repair or replace.
b) Indicator is normal.	1. Failure or short of constant current (R-25 or R-75).	Repair or replace.
c) Confused recording (imperfect erasing of former recording)	2. Defective oscillator circuit.	Check and repair.
	1. Defective erasing head.	Check and repair.
d) Confused recording (confusion of CH-1 and CH-2)	1. Defective adjustment of RP head angle.	Check and repair.
Records but doesn't reproduce (CH-1, CH-2).	1. Defective select switch or poor contact select switch.	Repair or replace.
	2. Defective SP, head phone.	Replace.
	3. Defective jacks of Sp, head phone and line out.	Repair or replace.
	4. Magnetized erasing head.	Demagnetize or replace.
CH-1 (or CH-2) records and reproduces, but CH-2 (or CH-1) doesn't reproduce.	1. SP head phone failure.	Replace.
	2. SP, headphone, and line out jacks defective.	Repair or replace.
Noise (CH-1, CH-2).	1. Biasing oscillator wave distortion.	Adjust circuit.
	2. Defective motor.	Repair or replace.
	3. Magnetized RP head.	Demagnetize with demagnetizer.
Much noise only in CH-1 (or CH-2).	1. Defective contact VR 1-1, 1-2, 1-3 (or VR 2-1, 2-2, 2-3)	Replace.
	2. Defective transistor (especially TR 1-1 or TR 2-1)	Replace.
	3. Defective circuit elements.	Replace.
	4. Contact among elements on CH-1, or defective soldering.	Replace.
Loud noise when connecting microphones.	1. Lack of capacity in filter circuit (C 105, C 106, C 107).	Replace.
Much noise only in CH-1 (or CH-2).	1. Lack of capacity in filter circuit (C2, C10, or C52, C10).	Replace.
	2. Bad earth.	Repair.
	3. Defective microphone.	Replace.
	4. Bad insulation of C1 (or C51).	Replace.
Bad tone (only one channel).	1. Bad circuit elements or transistors.	Replace.
	2. Inadequate AC bias.	Adjust.
	3. Worn head.	Replace.
	4. Bad microphone.	Replace.
	5. Bad speaker.	Replace.
Lack of high tone (only one channel).	1. Bad angle of RP heads.	Adjust angle with standard tape at 7,000 c/s.
	2. Inadequate capacity of C12 (or C62).	Repair.
	3. Inadequate capacity of C15 (or C65).	Repair.
	4. Excessive capacity of C19, C21 (or C64, C71).	Repair.
	5. Not enough pressure of RP heads pad or dust adheres to slit part.	Repair or clean.
	6. Bad speaker.	Replace.
	7. Inadequate operation of AC bias oscillator circuit.	Set 200 mA of AC bias current.
Lack of low tones.	1. Inadequate capacity of C7, C6, R14 (or C57, R64, C56).	Replace.
Unable to erase.	1. Erasing head broken or short.	Replace.
	2. Bad position of erasing head.	Adjust erasing head position.
	3. Lack of erasing current.	Repair.
	4. Bad contact of tape and erasing head.	Clean.
Cross talk between top and bottom tracks.	1. Bad position of tape guide and wobbling of tape.	Adjust tape guide and head position.
Poor volume.	1. Defective circuit elements	Check and replace.
	2. Bad circuit elements or poor contact with adjoining elements and defective soldering.	Adjust or replace.
	3. Defective biasing oscillator circuit.	Check and repair.
	4. Defective head, microphone and speaker.	Check and replace.
Much hum.	1. Defective contact of RP heads with amplifier.	Check and repair.
	2. Close arrangement of RP lead wire.	Move as far as possible.
	3. Defective wiring of RP heads.	Move motor away from AC cord and fix appointed position.
	4. Small capacity in smoothed circuit of amplifier C10, C106, C107 (or C60).	Check and replace.
	5. Defective earth circuit.	Check and repair.

	R-S4274a	On-off switch–rocker type	1
	R-S4275	Muting switch–recording switch	1
	R-S6294	Speaker–4″ free edge permanent dynamic, impedance 8 ohms	2
	R-S6293a	Microphone–directional dynamic, impedance 200 ohms	2
	2SB303	Transistor–1st audio amplifier (for each channel)	2
	2SB186	Transistor–2nd audio amplifier (for each channel)	2
	2SB186	Transistor–3rd audio amplifier (for each channel)	2
	2SB186	Transistor–4th audio amplifier (for each channel)	2
	2SB373	Transistor–power amplifier-push-pull (for channel 1)	2
	2SB373	Transistor–power amplifier-push-pull (for channel 2)	2
	2SB272	Transistor–AC biasing oscillator	2
	1S188 or 1N60	Diode–audio level detector (for each channel)	2
	R-S1230	Rectifier–selenium rectifier	1
MISCELLANEOUS - 1			
	R-S2131	Jack–for headphone	1
	R-S2123	Jack–with switch, for MIC. input	2
	R-S2124	Jack–less switch, for AUX. input, line and SP. output	6
	R-S2028a	Socket–for AC output	1
	R-S2133	9 pin socket–for AC voltage selec.	1
	R-S1227	9 pin plug–for AC voltage selec.	1
	R-S2134	Pilot socket–with retaining angle for VU meter	1
	R-S2125	Pilot socket–with retaining angle	1
	R-39218	Switch base–for record/play switch	2
	R-25144	Terminal–for record/play switch	12
	R-13051b	Flat spring–for record/play switch	4
	R-15141	Pin–for record/play switch	4
	R-S1044	Cartridge fuse–1 amp.	1
	R-S1038	Fuse holder	1
	R-S1203	Pilot lamp–9 volts, 0.1 amp.	2
	R-28085	Heat sink–for transistor (2SB373)	4

SYMBOL NO.	STOCK NO.	DESCRIPTION	Q'ty

MISCELLANEOUS - 2

	R-26627a	Heat sink–for transistor (2SB272)	1
	R-41370	Insulation seat–for Tr. (2SB373)	4
	R-44223	Insulation rubber–for Tr. (2SB373)	4
	R-35247	Plastic washer–for Tr. (2SB373)	8
	R-S8942	Speaker cord–with plug	2
	R-S3134	AC line cord	1
